

StemSoft Software Inc.

Informatics for the medical specialties

Professional Consulting Services

StemSoft's team of experienced technical and healthcare professionals have an average of 10 years of experience, having implemented our software solutions in over 120 programs world wide. We offer a variety of value-added professional consulting services, including:

Project Management

StemSoft consultants can help you assess and manage the impact that the StemSoft family of applications will have on your ward, clinic, and lab. An analysis of the resources required to install, implement, and use BMTserve™, StemLab™, and TissueTracker™ can be produced and executed to help guide your team through these changes.

Training

StemSoft offers customized training sessions for both new and experienced users to meet your unique needs, including Internet-based training sessions, and on-site training.

Maintenance and Support

The StemSoft Annual Maintenance and Support Plan ensures that your investment in StemSoft software remains current: receive unlimited technical support and obtain free upgrades.

Custom Report Writing

Solving your data retrieval problems can be a challenge for any data management professional. StemSoft consultants are here to help and can quickly produce customized Crystal® reports that meet your unique insurance, FACT, clinical, registry, or regulatory reporting needs.

Hardware Selection and Configuration

StemSoft consultants can specify server requirements, provide you with estimated costs, present you with alternative solutions, and can even configure your hardware and software. StemSoft consultants support the Microsoft® Windows® standards.

StemSoft is dedicated to providing software solutions that meet the needs of cellular therapy manufacturing, clinical blood and marrow transplantation and biospecimen repositories. StemSoft provides end to end solutions for information management, quality assurance and regulatory compliance requirements of the industries it serves.

StemSoft Software Inc.

Informatics for the medical specialties

Technical Consulting Services

StemSoft's team of experienced technical and quality control professional are available to provide advanced data conversion and system integration solutions to meet your specific requirements. Our technical consulting service offering includes:

HL-7 Interfaces

The StemSoft Health Level Seven (HL7) interface module allows you to import real-time data from your existing HL7 enabled hospital information systems. StemSoft offers a standard A/D/T (admission/discharge/transfer) and LIS (laboratory information system) interface. Since the StemSoft CORE™ database integrates both your clinic and stem cell processing laboratory data there is no need to purchase duplicate interfaces. HL7 is the recognized healthcare industry database integration standard, so you can rest assured that your StemSoft HL7 Interface investment is compatible with a wide range of existing hospital information systems.

Device Interfaces

Streamline your data entry by directly interfacing with the devices in your laboratory. Automatically pull real-time data from your freezer directly into StemLab™ or TissueTracker™ to minimize data entry errors. StemSoft currently provides standard device interfaces for over 300 existing drivers.

Data Conversion

Converting existing patient or product data from your current electronic record will reduce your deployment time while ensuring that your existing data appears consistently in BMTbase™, BMTserve™, StemLab™ and TissueTracker™. StemSoft consultants can convert your existing patient or product data from many formats, including Microsoft® Excel, Paradox®, Microsoft® SQL Server, Oracle®, Microsoft® Access, and CIBMTR, into your new StemSoft CORE™ database.

Point-of-Care-Entry Screens

StemSoft consultants can produce custom web-based data entry forms (POC Screens) that automatically populate your StemSoft CORE™ database. These POC Screens allow you to meet the unique data entry requirements and workflow of specific team members.

StemSoft is dedicated to providing software solutions that meet the needs of cellular therapy manufacturing, clinical blood and marrow transplantation and biospecimen repositories. StemSoft provides end to end solutions for information management, quality assurance and regulatory compliance requirements of the industries it serves.
